RUTHERFORD STRUCTURED GROWTH PORTFOLIO

MONTHLY PORTFOLIO REPORT

AUGUST 2023

RISK PROFILE

RECOMMENDED MINIMUM INVESTMENT TERM

INCEPTION DATE: 08 September 2017

INVESTMENT OBJECTIVE

The Rutherford Structured Growth Portfolio represents a model investment strategy that seeks to grow capital and income at a moderate to high pace for investors with an investment horizon beyond seven years. It invests in a range of unit trust funds diversified across various asset classes and asset managers utilising specialist mandates. The mandate uses a blend of active and passive funds. The local equity mandates target a 75%/25% and 100% passive allocation for global equity funds.

This strategy aims to achieve high capital growth over a long-term horizon and therefore has a high exposure to growth assets such as equities and minimum exposure to income-generating asset classes.

RETURN OBJECTIVE/PERFORMANCE TARGET

The investment strategy targets returns of CPI + 5% p.a. over rolling six year periods.

BENCHMARK

The Rutherford Structured Growth Portfolio is measured against Headline CPI (urban) plus 5%.

REGULATION 28

This model portfolio is managed to comply with Regulation 28

PORTFOLIO FEES

Discretionary Management Fee (incl. VAT): 0.58% p.a.

Unit trust fund fees: Weighted Average Total Investment Charge (TIC): 0.94%

The fees quoted on the factsheet are based on the funds available on the Old Mutual Wealth platform and could differ slightly, depending on the LISP used. The fees quoted exclude any Fund Access Fees charged by the platform

RISK STATISTICS*

Measure	Portfolio
Maximum Drawdown	-17.10%
Sharpe Ratio	0.36
Standard Deviation	10.01%

PERFORMANCE SUMMARY

* For model portfolio performance returns, both include reinvested income. All returns are calculated in ZAR net of underlying portfolio fees but gross of any discretionary fund management and investment vehicle administration fees. Client specific net returns are provided in the reports of the chosen Linked Investment Service Provider (LISP). Where life funds are held, performance is calculated based on holding of the untaxed class. In the table above, all returns prior to the inception date is based on simulated returns.

AUGUST 2023

FUND MANAGER INFORMATION

Ubaydullah Hassen is responsible for investment decisions in the team, including manager research, asset allocation, model portfolio design and management. Ubaydullah is also responsible for client analysis and investment reportbacks. He has a B.Com Honours in Financial Analysis and Portfolio Management and is a CFA Charterholder with 9 years of related investment experience.

DIVERSIFICATION AND MANAGEMENT

Utilising fund manager research performed by Old Mutual Multi-Managers, we select and monitor the underlying funds, while the fund managers themselves have flexibility to decide which underlying assets to buy within the fund mandate. We carefully blend fund managers with complimentary investment styles to achieve a well-diversified but dynamic mix of equities, money market instruments, conventional bonds, inflation-linked bonds and listed property.

The management of this model portfolio range is performed through a partnership between Rutherford Asset Management and Tailored Fund Portfolios. Both parties hold a CAT 2 Discretionary Fund Manager licence. Active manager selection, asset allocation and portfolio construction is based on the research process of Old Mutual Multi-Managers in consultation with Rutherford Asset Management. The selection of passive investment vehicles is performed by the Tailored Fund Portfolio team. This range is managed and monitored on an ongoing basis by both parties. Model Portfolio reporting and feedback is provided at least quarterly to all representatives of Rutherford Asset Management

FUND COMMENTARY

Global equities declined in August, as the higher-for-longer interest rate outlook in developed countries weighed on risk assets. It should also be noted that the decline follows a strong run, and these types of corrections are normal. The MSCI All Country World Index lost 2.8% in the month, reducing the year-to-date dollar return to 14.8%. Returns have mostly been driven by multiple expansion this year, not earnings. Over the past twelve months, the global equity benchmark returned 14% in dollars.

Apart from weaker global markets, a deteriorating outlook in China weighed on emerging market equities. The MSCI Emerging Markets index lost 6.1% in dollar terms in August and were up 1.3% over 12 months, still well behind developed economies.

Higher bond yields weighed on fixed income returns in August. The benchmark US 10-year Treasury yield rose from 3.9% to 4.1% in the month, while the policy-sensitive 2-year yield was flat at 4.8%. The US yield curve therefore remains deeply inverted. A firmer dollar also reduced returns from outside the US, with the Bloomberg Global Aggregate Bond Index losing 1.4% in unhedged dollar terms in the month. The year-to-date return is similar, and the loss over 12 months is 0.2%.

South African equities followed global markets lower. The FTSE/JSE Capped SWIX lost 4.8% in August, cutting the 2023 return down to 2.7%. The one-year return is only 10.8%.

The big declines came from resources shares, but financials and industrials were also negative in August. Year-to-date, financials and industrials are still solidly in positive territory, but the slump in resources shares has wiped out much of the overall SA equity return.

The local listed property sector gained in August, with the FTSE/JSE All Property Index (ALPI) returning 0.8% in the month. This boosted year-to-date returns - 0.7%, and the 12-month return to 9.7%.

South African nominal bonds were marginally negative, with the ALBI returning -0.2% in August. This means the year-to-date return is 3.9% and the 12-month return 7.5%. Inflation-linked bonds were also positive, gaining 0.4% in the month and 1.8% over 12 months.

The rands rollercoaster ride continued in August. After rallying in July, it lost 5.6% against the dollar to close the month at R18.87 per dollar. The rand is still 10.3% weaker against the dollar over the past 12 months, providing a boost to the returns of global assets from the point of view of South African investors.

Old Mutual Wealth Tailored Fund Portfolios ("TFP") is a division of Old Mutual Life Assurance Company South Africa Limited ("OMLACSA"), registration number 1999/004643/06, which is a discretionary financial services provider authorised in terms of the Financial Advisory and Intermediary Service Act 37 of 2002 ("FAIS") with licence number 703.

Old Mutual Investment Services (Pty) Ltd ("OMIS"), registration number 1996/000452/06, is an administrative financial services provider authorised in terms of FAIS.

Unit Trust Managers registered in terms of the Collective Investment Scheme Control Act 45 of 2002.

What are Discretionary Model Portfolios?

A Discretionary Model Portfolio is a combination of Old Mutual or other unit trust funds that are grouped together by TFP and made available by OMIS on its administrative platform.

Unit Trust Disclaimers

You should ideally see unit trusts as a medium to long term investment. The fluctuations of particular investment strategies affect how a fund performs. Your fund value may go up or down. Therefore, investment capital or return on your investment cannot be guaranteed. How a fund has performed in the past does not necessarily indicate how it will perform in the future. The fees and costs charged for managing your investment are accessible on the relevant fund's Minimum Disclosure Document (MDD) or table of fees and charges, both available on the manager's public website. Unit trusts are traded at ruling prices, may borrow to fund client disinvestments and may engage in script lending. The daily price is based on the current market value of the underlying fund's assets plus income minus expenses (NAV of the portfolio) divided by the number of units on issue. Should the underlying fund hold assets in foreign countries it may have risks regarding liquidity, the repatriation of funds, political and macro-economic situations, foreign exchange, tax, settlement, and the availability of information. Please contact us for risks specific to each country. A fund of fund is a portfolio that invests in other funds which levy their own charges, which could result in a higher fee structure for the fund of funds. The Net Asset Value to Net Asset Value figures are used for the performance calculations. The performance quoted is for a lump sum investment. The performance calculation includes income distributions prior to the deduction of taxes and distributions are reinvested on the ex-dividend date. Performances may differ as a result of actual initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance returns are the time-weighted return over the performance period measured. A manager has the right to close the portfolio to new investors in order to manage it more efficiently in accordance with its mandate.
